

ANDRES SANTIAGO ACEVEDO MANCERA

Fullstack developer - React, FastAPI & AI Integration

Fullstack developer building AI-augmented web applications — from database design and REST APIs (FastAPI, .NET ecosystems) to React interfaces, with hands-on experience designing and shipping AI features end-to-end: an OpenAI-powered chatbot combining semantic search and structured queries for enterprise data, and computer-vision integration for industrial automation. Background in physics and quantum computing research brings rigorous, first-principles problem-solving to engineering work. Currently seeking remote fullstack roles at English-speaking companies where AI is a core part of the product, not an add-on.

LANGUAJES

- Native Spanish
- Advanced English B2+
- Learning German
- Learning French

SOFT SKILLS

Problem-solving
Continuous learning
Proactiveness
Adaptability
Teamwork

WORK EXPERIENCE

Frontend Developer

Intelisoft Software - February to August 2025 and February 2026 to Present.

Contributed to PRISMA, an internal engineering-process platform for a CENIT (Ecopetrol Group) contractor. Built the React/Metronic frontend across two phases, consuming REST APIs from a .NET backend, and helped design the database's ER model. **Designed and built an AI chatbot end-to-end** using the OpenAI API, combining semantic search with structured queries to answer questions and auto-generate reports — now deploying on Azure.

Fullstack Developer

Candelasoft - August 2025 to June 2026.

Built fullstack systems for industrial automation, integrating robotic arms and computer-vision models into web control interfaces, packaged with Electron as cross-platform desktop apps (Linux, macOS, Windows). Rebuilt the frontend for two projects from Figma designs, connecting to backend services via REST and real-time protocols (WebSockets, MQTT). Redesigned the database schema to scale across projects and built FastAPI REST APIs, including a hybrid modular/hexagonal architecture for cross-team clarity between robotics, AI, and development. Worked under SCRUM, and supported an internal tool using OCR and web scraping for automated document processing.

Freelance Web Developer

Since November 2022, independently designed and delivered end-to-end web and mobile products for clients in Colombia, the U.S., and Mexico — UI/UX (Figma), frontend (React/React Native), backend (FastAPI), and cloud deployment. **Key project** — Akontrol Diagnósticos: full redesign end-to-end — Figma UI, React frontend, FastAPI backend, database design, and CI/CD with Docker across Railway and AWS. Also built a full-stack event-services marketplace app (React Native + FastAPI with auth) for a Mexican client, plus sites for Hyfire SAS, My Ideal Car US, and academic/small-business clients.

MY STACK

Languages	Frontend	Backend	Tools
Python	Figma	NodeJS	Terminal
JavaScript	HTML5	FastAPI	Cursor
TypeScript	CSS3	PostgreSQL	Docker
	React	AWS	GitHub

ANDRES SANTIAGO ACEVEDO MANCERA

Physicist

Additionally, I have worked as a quantum computing researcher specialized in variational algorithm simulation, quantum decision diagrams, and machine learning applications for many-body quantum systems.

EDUCATION

Physics. Universidad Nacional de Colombia.
February 2020 to March 2025.

Microdegree Program for **Artificial Intelligence**. Fusemachines.
July 2023 to April 2024.

Diploma in Programming Skills with emphasis on **Web Applications**. Ministerio de Tecnologías de la Información y las Comunicaciones y Universidad de Caldas.
March 2022 to November 2022.

RESEARCH EXPERIENCE

Quantum Computing Researcher

Universidad Nacional de Colombia. Superconductivity and Nanotechnology group.
November 2022 to January 2025.

- Benchmarked **Decision Diagrams** performance for simulating variational quantum algorithms, including QAOA and VQE evaluating computational efficiency and scalability.
- Investigated Neural-Network Quantum Field States (**NQFS**) for quantum simulation of bosonic models in continuum field theory, focusing on machine learning approaches to many-body quantum systems.
- Developed quantum state simulation methodologies using Variational Quantum Decision Diagrams (**VQDD**) with automatic differentiation for parameter optimization and enhanced computational performance.

International Conference

Poster presentation titled "**Variational Decision Diagrams Quantum States**" in the conference ICE-9: Quantum Information in Spain at Puerto de la Cruz, Tenerife from November 11th to 15th, 2024.

Pre-printed Scientific Article

Variational decision diagrams for quantum-inspired machine learning applications. Santiago Acevedo-Mancera, Vladimir Vargas-Calderón, Herbert Vinck-Posada. Submitted on February 5th, 2025.
